DETAILED ACTION

1. Applicant's response filed on 6/12/2003 has been fully considered.
2. Claims 21-40 are pending.
3. The finality of the previous Office Action has been withdrawn in view of Applicant's comment; however, upon further consideration the following Final Office Action is provided. The Examiner would like to inform Applicant that there was a typographical error in the previous final Office Action. The 35 U.S.C. 102(b) rejection should be applied to *only* claims 37 and 38.

Claim Rejections - 35 USC § 102

4. Claims 37 and 38 are rejected under 35 U.S.C. 102(b) as being anticipated by Schmidle et al. (US 4,273,819).

Schmidle discloses a floor covering having a backing sheet, foamable base having a chemically embossed portion, a layer having a printing ink composition, a wear layer having a mechanically embossed portion and a portion that has not been mechanically embossed, and a paper top layer in the order thereof (col. 13 and 14). The chemical embossed depth is greater than the mechanical embossed depth (see Fig. 1 and 2). The chemically embossed portion is free from mechanical embossment (see Fig. 1 and 2). The wear layer comprises polyvinyl chloride, and is free from compounds that would lead to chemical embossing (col. 6, line 25). The claimed topcoat is equivalent to the paper top layer, the claimed strengthening layer is

Art Unit: 1774

equivalent to the backing sheet, and the claimed design layer is equivalent to the layer having the printing ink composition. Portions of the layer having the printing ink composition comprise no retarders. The printing ink composition is used for making the chemical embossment, in which portions of the ink composition contain retarder and other portions of the ink composition contain no retarders in order to provide the chemical embossment effect.

Response to Arguments

5. Applicant disagrees with the above rejection. Applicant's argument is based on that Schmidle does not teach a product on which mechanical embossing is performed on a cured wear layer or after chemical embossing. This argument is not persuasive for the following reason. The Examiner agrees that Schmidle does not teach a product on which mechanical embossing is performed on a cured wear layer or after chemical embossing, however, claims 37 and 38 do not expressly recite a product on which mechanical embossing is performed on a cured wear layer or after chemical embossing. Therefore, claims 37 and 38 stand rejected.

Allowable Subject Matter

6. Claims 21-36, 39 and 40 are allowed. Schmidle neither teaches nor suggest a product on which mechanical embossing is performed on a cured wear layer or after chemical embossing.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1774

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
